PROFILE

Final year Computer Science student with hands on experience building backend systems that handle real constraints, including concurrent transactions, authentication and data integrity under load. My four self directed projects total over 35 automated tests and span database transaction safety, real time messaging and probabilistic simulation. Alongside my degree I work as an IT Advisor at Manchester Metropolitan University, resolving technical issues for staff and students and translating problems between technical and non technical people daily. Seven years in supervisory and customer facing retail roles before that built my ability to work under pressure, take ownership and communicate clearly under scrutiny.

TECHNICAL SKILLS

Languages: Python, SQL, C#, Java, JavaScript

Databases: PostgreSQL, SQLite, database design, transactions, indexing, row level locking

Backend and Development: FastAPI, Flask, SQLAlchemy, REST APIs, JWT, Git, Docker Compose, pytest

PROJECTS

NovaBank Python, FastAPI, SQLAlchemy, PostgreSQL | 2026

Online banking application covering accounts, transfers, savings pots, spending insights, card freezing and administration.

- Built the transfer system using a double entry ledger, recording debit and credit entries within the same database transaction
- Used PostgreSQL row level locking to handle concurrent transfers safely and tested against a real PostgreSQL database
- Implemented JWT authentication, bcrypt password hashing, login rate limiting and account ownership checks
- Wrote 11 pytest tests covering the ledger and transfer functionality; ran the full stack with Docker Compose

PremierIQ Python, FastAPI, Next.js, NumPy | 2026

Premier League dashboard providing live standings, match simulation, squad information, stadium data and fixture analysis.

- Built a match prediction system using recent form, last five matches, venue, head to head results and second half scoring rates
- Ran 10,000 Poisson Monte Carlo simulations per fixture to generate probability distributed match outcomes
- Built a FastAPI backend connecting to football data and weather APIs with an in process cache to reduce repeated requests, keeping API keys server side

ChatWire Python, Flask, Socket.IO, SQLite | 2026

Real time messaging application supporting live message delivery and persistent channel history.

- Used Socket.IO to handle real time communication between users, with cursor based pagination for channel history
- Implemented bcrypt authentication, signed session tokens, login lockout and access control checks restricting users to authorised channels
- Wrote 24 pytest tests covering authentication, access control and socket functionality

ApexIQ Python, FastAPI, Next.js | 2026

Formula 1 dashboard bringing together live timing, circuit data, championship standings and driver comparisons.

- Developed the backend using FastAPI, integrating external Formula 1 data sources while keeping API requests and keys server side
- Added live timing and GPS circuit visualisation, and built championship and driver comparison features

EDUCATION

BSc (Hons) Computer Science, Manchester Metropolitan University Sep 2023 – May 2027

BTEC Level 3 Extended Diploma in Engineering (DDD), Milton Keynes College Sep 2013 – Jul 2015

EXPERIENCE

IT Advisor | Manchester Metropolitan University Sep 2025 – Present, part time

- Diagnose hardware, software, account and network issues for staff and students through the university service desk
- Image and deploy Windows PCs and Macs; provide support for Microsoft 365, MFA and campus printing
- Manage a busy ticket queue while communicating technical information clearly to people with different levels of technical knowledge

Sales Advisor | Belstaff, Manchester Oct 2024 – Oct 2025

- Used SQL to query customer data and segment clients by purchase history for targeted outreach
- Worked towards individual sales targets within a luxury retail environment

Retail Leadership | Origin Kicks, Selfridges, UNIQLO, Anya Hindmarch, Ralph Lauren, Harding Brothers 2017 – 2024

- Progressed through supervisory and loss prevention roles across luxury and high street retail, including leading a sales team on a cruise ship deployment (Harding Brothers) and reducing stock loss through new cross department processes (Selfridges)
- Consistently trained and developed junior staff while managing customer facing operations under pressure

Available from May 2027.
