PROFILE

Final year Computer Science student at Manchester Metropolitan University with practical experience building software in Python, SQL and JavaScript. I build projects in my own time, including a banking API that keeps transfers consistent under concurrent requests using PostgreSQL row level locking, a real time messaging app and a statistical prediction model. Alongside my degree, I work in university IT supporting staff and students across hardware, software, networking and account access. Looking for a Graduate Software Engineer role starting in September 2027.

TECHNICAL SKILLS

- Languages:** Python, SQL, JavaScript
Backend: FastAPI, Flask, REST APIs, SQLAlchemy, Socket.IO, Pytest
Databases: PostgreSQL, SQLite
Tools: Git, GitHub, Docker, Docker Compose, Railway
IT: SCCM, Jamf, Active Directory, Microsoft 365, Windows, macOS, Networking

SOFTWARE ENGINEERING PROJECTS

NovaBank · Python, FastAPI, SQLAlchemy, PostgreSQL, Docker, Railway · Live

- Banking API that handles account transfers and tracks customer spending.
- Implemented a double entry ledger so every transfer records matching debit and credit entries within a database transaction
 - Used PostgreSQL row level locking to prevent race conditions when multiple transfers affect the same account at the same time
 - Added idempotency keys to prevent duplicate transactions when requests are retried
 - Wrote integration tests with Pytest against a live PostgreSQL database to verify transfers, balances and ledger consistency

PremierIQ · Python, FastAPI, Next.js, NumPy, Google Gemini API · Live

- Premier League analytics application that uses historical match data to estimate outcomes for upcoming fixtures.
- Backtested the model on 20 past matches; it picked the correct result 75% of the time
 - Implemented Poisson based probability modelling and 10,000 Monte Carlo simulations per fixture
 - Added in memory caching to reduce repeated external API requests and improve response times
 - Integrated the Gemini API to turn simulation results into readable explanations without replacing the underlying statistical model

ChatWire · Python, Flask, Socket.IO, SQLite · Live

- Real time messaging application with persistent public channels and user authentication.
- Used WebSockets through Flask Socket.IO to deliver messages without repeatedly polling the server
 - Implemented password hashing with bcrypt and signed session tokens to protect user accounts
 - Added database pagination and automated tests covering connection, authentication and messaging edge cases

WORK EXPERIENCE

IT Advisor · Manchester Metropolitan University · Sep 2025 to Present · Part time

- Second line support for students and staff with hardware, software, networking and account access issues across the university
- Diagnose problems involving Windows and macOS computers, printers, network connections, Microsoft 365 and MFA
- Provision, image and deploy university devices using Microsoft SCCM
- Manage service requests through Freshservice, prioritising issues according to urgency and service requirements
- Work with the graduation and enrolment teams to set up and support laptops, desktops, software and AV equipment for 27 graduation ceremonies over 14,000 graduates and for 5,000+ daily inbound calls for clearing

Sales Advisor · Belstaff, Manchester · Oct 2024 to Sep 2025

- Used SQL to segment the customer database and decide who to invite to private sales
- Advised customers on a luxury product range and kept stock records accurate
- Worked with store management and head office to keep daily operations running

EDUCATION

BSc (Hons) Computer Science · Manchester Metropolitan University · Expected May 2027

Predicted 2:1
BTEC Level 3 Extended Diploma in Engineering · Milton Keynes College
Grade: Triple Distinction (DDD)
